

Chum salmon

Wrong subtitle (ni) (Salmonids)

Chum salmon is a wild Pacific salmon and the third most widely distributed species in the salmonids group. Like other Pacific salmonids, it hatches in freshwater, then the fry moves to marine waters soon after emergence and migrate offshore across the North Pacific. Mature fish return to their native rivers from late summer to March, with peak spawning in early winter in lower river reaches close to the coast, before dying after spawning.

Chum is marketed as whole fish, HG, portions, fillets, and salted and smoked products. Lower quality grades are also well suited for steaks and canned production, while its roe is traditionally the highest-value component. Keta roe is especially prized for its delicate taste and its larger size compared with pink salmon roe.

The main fishing nations are Russia and the United States, while Japan and Canada also remain established fisheries for the species.

Categories: Wholesale, Processing, HoReCa, Retail.

Size: HG - 1-2 / 2-3 / 3-4 / 4-6 / 6-9 lbs

Countries:	Nutrition data:	Product forms:	Processing:
Canada	Calories: 144 kcal.	HG	Seafood
China	Protein: 22 g.	Fillets	Landfrozen
Japan	Fat: 3.7 g.	ROE	
Russia	Omega 3: 0.7 g.	Steaks	
United States	Water: 74 g.

About **SEA CHEF TECHNOLOGIES**

SIA Sea Chef Technologies is an international seafood trading and sourcing company built on a simple idea: to connect reliable seafood production with professional, stable service through strong management, disciplined execution, and modern IT tools. Over time, the company has grown from a focused team into a structured organization with employees and agents operating across different markets, working with a broad portfolio of **frozen and fresh fish, shrimps, and molluscs**. Our growth has been practical rather than theoretical. Every customer, supplier, and project has helped us refine the way we work, from purchasing and quality control to logistics, documentation, and risk management.

We operate in the international seafood B2B segment. Our role is not simply to buy and sell fish, but to create dependable supply solutions in a global market shaped by seasonality, catch volumes, quotas, logistics costs, regulations, currency fluctuations, and shifting customer needs. We combine product expertise with structured internal processes so that our customers receive the right product, in the right quantity, with the right documentation, and in a quality fully suited to its final use. **In this sense, our real product is not only seafood itself, but also information, service, and execution.**

We serve a broad range of professional customer segments across the seafood chain, including importers and wholesalers, processors, distributors, HoReCa businesses, and supermarket chains. Some of our customers are direct end users with highly specific quality and compliance requirements, while others rely on us as a sourcing and logistics partner to bridge information gaps and secure stable supply. What unites them is the need for a professional counterpart who understands seafood products, works confidently with specifications and volumes, and can support both long-term supply programs and spot business. Our customers value speed, clarity, accuracy in documentation, honest communication, and reliable complaint handling, because their own success depends on stable performance from every supplier in the chain.

Our company is guided by a clear set of core principles: promptness, reliability, transparency, and long-term partnership. This combination of product knowledge and process discipline is what defines Sea Chef Technologies and allows us to serve the international seafood market with confidence and consistency.

**The right quality fish. For the right customer.
At the right time. Delivered globally.**
